#### **DETAILED ACTION**

#### Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on November 5, 2004 has been entered.

## Response to Amendment

Accordingly, claims 1, 24, 55 and 64 were amended, and new claims 71-81 were added. Currently, claims 1-24, 55-66 and 71-81 are pending in this application.

#### Claim Objections

Claims 1, 24, 55, 64 and 71-80 are objected to because of the following informalities:

Re claims 1, 24, 55, 71, 73, 75 and 79, the process limitation "deposited" or "being formed by chemical or physical vapor deposition" is not germane to the issue of patentability of the device itself. Therefore, this limitation has not been given patentable weight.

Re claims 55 and 75, it has been held that the recitation that an element is "capable of" performing a function ("movement") is not a positive limitation but only requires the ability to so perform. It does not constitute a limitation in any patentable sense. *In re Hutchison*, 69 USPQ 138.

Re claims 1, 24, 55, 64, 72-74, 76-78 and 80, the functional recitation that "operable to move" or "be actuated by an electrostatic force derived from an electrostatic field established

Art Unit: 2822

between the movable portion and an electrode" has not been given patentable weight because it is narrative in form. In order to be given patentable weight, a functional recitation must be expressed as a "means" for performing the specified function, as set forth 35 U.S.C. 112, 6<sup>th</sup> paragraph, and must be supported by recitation in the claim of sufficient structure to warrant the presence of the functional language. *In re Fuller*, 1929 C.D. 172, 388 O.G. 279.

Appropriate correction is required.

### Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1, 4-6, 8, 9, 11-16, 18, 24, 64, 65 and 71-80 are rejected under 35 U.S.C. 102(e) as being anticipated by Bishop et al. (U.S. 6,124,650).

Re claims 1, 4-6, 8, 9, 11-16, 18, 24, 64, 65 and 71-80, Bishop et al. ("Bishop") discloses in FIG. 3 a micromechanical device (MEMS actuator) comprising: a semiconductor substrate 26;

Art Unit: 2822

a movable portion 20 and a flexible portion (hinge) 12 for allowing movement of the movable element 20 relative to the substrate 26; and a post (base) for connecting the movable element 20 to the substrate 26 via the flexible portion 12; wherein the flexible portion 12 comprises a nitride (ceramic) compound (Cr-N, Ta-N or Zr-N) and a late transition metal (Fe, Co, or Ni), the nitride compound and the late transition metal are in the same layer 14, and the layer 14 is a ternary or higher system [see col. 5, ln. 34-46].

Re further claim 9, since Bishop does not disclose the nitride compound comprising any oxygen, it is expressly understood that the nitride compound comprises 0% oxygen, which is less than 0.1% oxygen as claimed.

Re further claim 18, it has been held that a recitation with respect to the manner in which a claimed apparatus is intended to be employed (e.g. MEMS sensor) does not differentiate the claimed apparatus from a prior art apparatus satisfying the claimed structural limitations. *Ex Parte Masham*, 2 USPQ F.2d 1647 (1987).

## Allowable Subject Matter

Claims 2, 3, 7, 10, 17, 19-23, 66 and 81 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 55-63 would be allowable if rewritten or amended to overcome the objections of claim 55 set forth in this Office action.

The following is a statement of reasons for the indication of allowable subject matter: none of the prior art of record, taken alone or in combination, fairly shows or suggests all the combined limitations as claimed.

Art Unit: 2822

a movable portion 20 and a flexible portion (hinge) 12 for allowing movement of the movable element 20 relative to the substrate 26; and a post (base) for connecting the movable element 20 to the substrate 26 via the flexible portion 12; wherein the flexible portion 12 comprises a nitride (ceramic) compound (Cr-N, Ta-N or Zr-N) and a late transition metal (Fe, Co, or Ni), the nitride compound and the late transition metal are in the same layer 14, and the layer 14 is a ternary or higher system [see col. 5, ln. 34-46].

Re further claim 9, since Bishop does not disclose the nitride compound comprising any oxygen, it is expressly understood that the nitride compound comprises 0% oxygen, which is less than 0.1% oxygen as claimed.

Re further claim 18, it has been held that a recitation with respect to the manner in which a claimed apparatus is intended to be employed (e.g. MEMS sensor) does not differentiate the claimed apparatus from a prior art apparatus satisfying the claimed structural limitations. *Ex Parte Masham*, 2 USPQ F.2d 1647 (1987).

#### Allowable Subject Matter

Claims 2, 3, 7, 10, 17, 19-23, 66 and 81 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 55-63 would be allowable if rewritten or amended to overcome the objections of claim 55 set forth in this Office action.

The following is a statement of reasons for the indication of allowable subject matter: none of the prior art of record, taken alone or in combination, fairly shows or suggests all the combined limitations as claimed.

Re claim 55, none of the prior art of record fairly shows or suggests a micromechanical device comprising: a flexible portion that comprises a late transition metal and an element from groups 3A to 6A of the periodic table, wherein the late transition metal and the element from groups 3A to 6A of the periodic table are in the same film or layer and wherein the film or layer is a ternary or higher system.

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Khanh Duong whose telephone number is (571) 272-1836. The examiner can normally be reached on Monday - Thursday (9:00 AM - 6:00 PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Amir Zarabian can be reached on (571) 272-1852. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
